The water inside a water organ

Pnigeus · saved modern experiment · tank area 6 × chamber area · experiment time 5 s.

Gauge pressure 410.123 Pa; head 4.182 cm. Supplied 3.000 ambient-equivalent litres, released 1.565, vented 0.000. The chamber still holds 10.194 actual litres of air.

Modern constant-section model; vertical scale in metres

experiment time; vertical jumps are pump strokes

Solid blue: water chamber. Dashed brown: the separate sealed dry chamber, on the same pressure scale.

Reopen this exact action sequence. The reading, image, fonts and audio below are embedded and need no connection. Linked external editions require a connection.

Last release

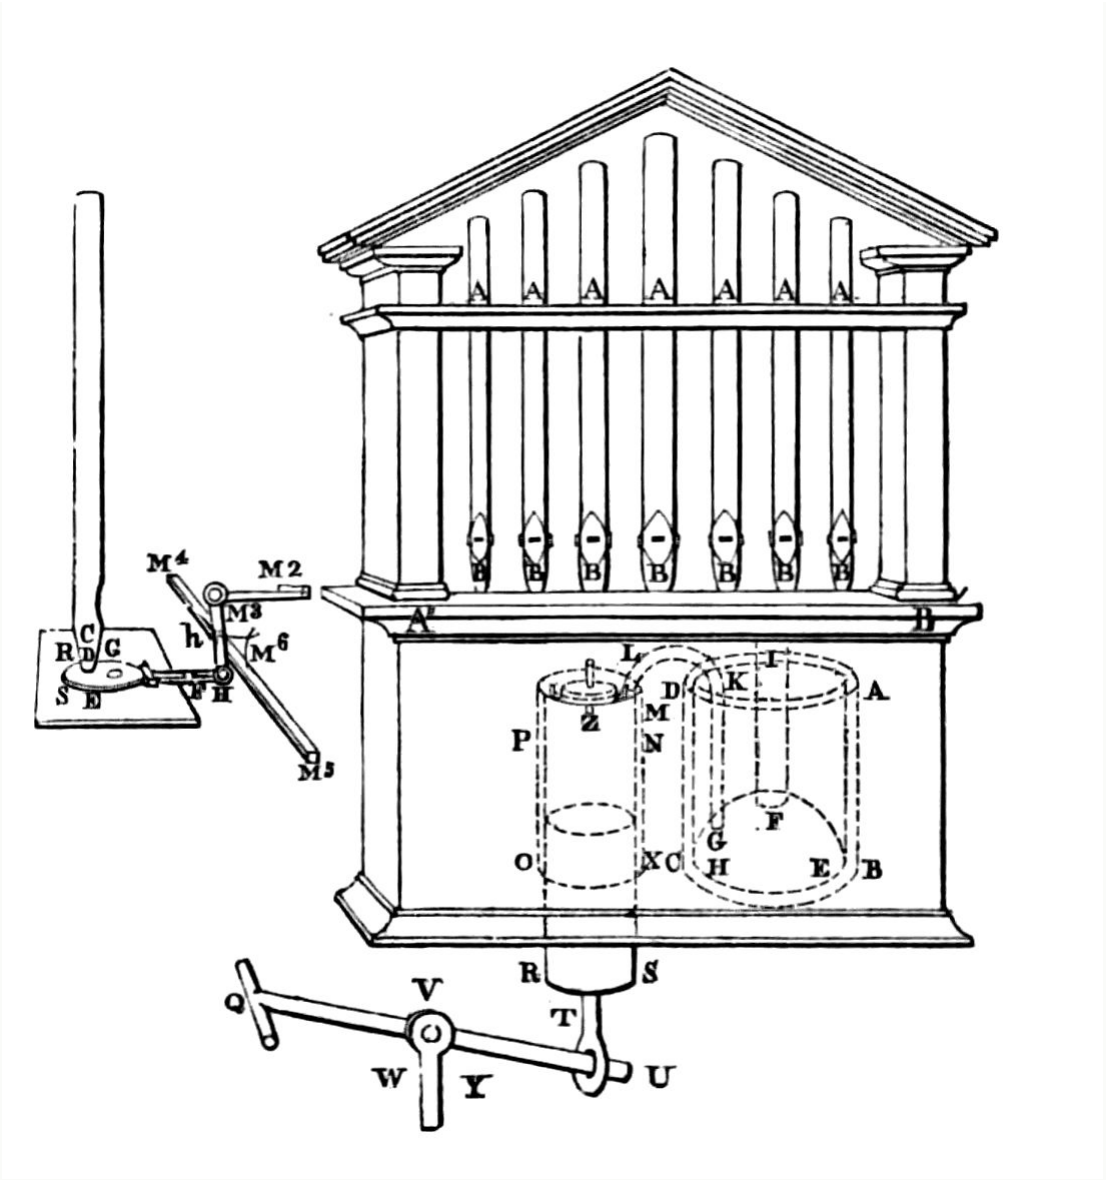

Action 5: Release for 5 s. Modern sine reference tones; illustrative pressure-to-amplitude mapping.

Actions in order

Action	Command	Time, s	Water, Pa	Dry, Pa	Vented, L
1	Pump 1 litre	0	286.082	11514.205	0.000000
2	Pump 1 litre	0	570.606	23028.409	0.000000
3	Pump 1 litre	0	853.597	34542.614	0.000000
4	Open 1 pipe (gates 1)	0	853.597	34542.614	0.000000
5	Release for 5 s	5	410.123	0.000	0.000000

Read the device

Vitruvius writes in Latin; the chamber’s name is borrowed from Greek. His description makes a useful reading exercise: find the container, the water and the object turned upside down.

Hero, *Pneumatics*, section 76, fig. 76. Greenwood's translation, edited by Woodcroft (1851), pp. 105–107. This is a nineteenth-century explanatory drawing, not a surviving ancient plan. Read the full description.

Vitruvius, *De architectura* X.8.2

intra arcam, quo loci aqua sustinetur, inest pnigeus uti infundibulum inversum

Inside the chest, where the water is held, there is a pnigeus, like an inverted funnel.

New English translation of this excerpt. The Latin word notes below explain the grammar and identify the corresponding parts.

Inspect Rose's Latin edition (1899). The model uses a straight-sided chamber; Vitruvius describes a funnel, while Hero describes a hemisphere.

Greek words at the bench

πνιγεύς pnigeus
The submerged chamber's name in this description. Other contexts give this word other senses; this is not a universal word for "air tank."

ὕδωρ hydōr
Water. Its combining form *hydr-* survives in "hydraulic." Here it helps hold the supply of air.

ἀήρ aēr
Air. This is what reaches the pipes. The English word "air" shares its ancestry.

Greek headwords and transliterations are reading aids, not a reconstructed pronunciation. πνιγεύς in LSJ; ὕδωρ; ἀήρ.

Latin word notes

intra arcam: 'inside the chest'. Intra takes the accusative; arcam is the accusative singular of arca. The bronze chest contains the water.

aqua sustinetur: 'water is held'. Aqua is the nominative subject; sustinetur is a present passive verb. The drawing's blue regions are connected under the rim.

pnigeus: the chamber's Greek loanword, nominative subject of inest ('is inside'). Its air is connected to the pump and the pipes, while its open lower edge lets water move.

infundibulum inversum: 'an inverted funnel'. Inversum agrees with the neuter infundibulum. The shape is Vitruvius's comparison, not the constant cross-section chosen for this experiment.

What the experiment assumes

The ancient descriptions supply a pump, an inverted chamber, water and selectively opened pipes. Everything numerical here belongs to a modern, quasi-static teaching model. Water settles instantly; air has constant temperature. We omit wave motion, pump mechanics, heat, leakage, wind-chest losses and actual pipe acoustics.

Two surfaces, one water supply

The chamber has a constant area of 0.04 m², its roof is 0.52 m high, its rim 0.04 m high. At rest both surfaces are 0.30 m high. If the inside surface drops by d metres, the outside rises by d/(R − 1), where R is the total tank area divided by the chamber area.

```
head = d × R / (R − 1)
gauge pressure = ρ × g × head
air volume = 8.8 + 40d litres
```

We use ρ = 1000 kg/m³, g = 9.80665 m/s² and atmospheric pressure 101325 Pa. The head is the difference between the two surfaces, not their height above the floor. Hydrostatic pressure, NASA.

Count the air, then let it out

Air stock is measured as the volume that the same amount of gas would occupy at our atmospheric pressure and temperature. One stroke delivers one of these ambient-equivalent litres. The chamber's actual air volume is different when pressurized.

```
stock = air volume × (1 + pressure / 101325)
flow = open pipes × 0.4 × √(pressure / 1000)
                          ambient litres / second
```

The flow law and coefficient are chosen. An exact time integral gives the next settled state; it stops withdrawing air at zero gauge pressure. Once inside water reaches the open rim, further delivered air escapes. No water is consumed.

▼ Why compare a sealed dry chamber?

It starts with the same 8.8 litres of air at atmospheric pressure and receives the same strokes and gate commands. Its volume stays fixed, its air is isothermal and it has no relief outlet. It is a separate counterfactual vessel, not the ancient chamber with its water removed. Its pressure is 101325 × (stock/8.8 − 1). A one-litre delivery produces a much larger pressure rise and the same outlet rule then removes air faster. The shared graph uses one pressure scale; the water trace can therefore appear small.

▼ What does the sound establish?

Four modern sine test tones form an A-major chord: A3, C♯4, E4 and A4 at A4 = 440 Hz. Their frequencies stay fixed. Amplitude follows an illustrative square-root pressure mapping, with short click-suppressing edges. These sounds mark the model's air reserve; they do not

reconstruct ancient tuning, pipe timbre, loudness, voicing or pressure-dependent pitch. Live playback and WAV downloads use the same finite samples.

The experiment clock advances only with “Release.” A pump stroke is an idealized instantaneous delivery. Changing the tank replays all actions with its new geometry. Shared links and downloads record the action order, including gate changes made at the same experiment time.

SIL OPEN FONT LICENSE Version 1.1 - 26 February 2007
-----------------------------------------------------------

PREAMBLE
The goals of the Open Font License (OFL) are to stimulate worldwide
development of collaborative font projects, to support the font creation
efforts of academic and linguistic communities, and to provide a free and
open framework in which fonts may be shared and improved in partnership
with others.

The OFL allows the licensed fonts to be used, studied, modified and
redistributed freely as long as they are not sold by themselves. The
fonts, including any derivative works, can be bundled, embedded,
redistributed and/or sold with any software provided that any reserved
names are not used by derivative works. The fonts and derivatives,
however, cannot be released under any other type of license. The
requirement for fonts to remain under this license does not apply
to any document created using the fonts or their derivatives.

DEFINITIONS
"Font Software" refers to the set of files released by the Copyright
Holder(s) under this license and clearly marked as such. This may
include source files, build scripts and documentation.

"Reserved Font Name" refers to any names specified as such after the
copyright statement(s).

"Original Version" refers to the collection of Font Software components as
distributed by the Copyright Holder(s).
```

"Modified Version" refers to any derivative made by adding to, deleting, or substituting -- in part or in whole -- any of the components of the Original Version, by changing formats or by porting the Font Software to a new environment.

"Author" refers to any designer, engineer, programmer, technical writer or other person who contributed to the Font Software.

PERMISSION & CONDITIONS
Permission is hereby granted, free of charge, to any person obtaining a copy of the Font Software, to use, study, copy, merge, embed, modify, redistribute, and sell modified and unmodified copies of the Font Software, subject to the following conditions:

1) Neither the Font Software nor any of its individual components, in Original or Modified Versions, may be sold by itself.

2) Original or Modified Versions of the Font Software may be bundled, redistributed and/or sold with any software, provided that each copy contains the above copyright notice and this license. These can be included either as stand-alone text files, human-readable headers or in the appropriate machine-readable metadata fields within text or binary files as long as those fields can be easily viewed by the user.

3) No Modified Version of the Font Software may use the Reserved Font Name(s) unless explicit written permission is granted by the corresponding Copyright Holder. This restriction only applies to the primary font name as presented to the users.

4) The name(s) of the Copyright Holder(s) or the Author(s) of the Font Software shall not be used to promote, endorse or advertise any Modified Version, except to acknowledge the contribution(s) of the Copyright Holder(s) and the Author(s) or with their explicit written permission.

5) The Font Software, modified or unmodified, in part or in whole, must be distributed entirely under this license, and must not be distributed under any other license. The requirement for fonts to remain under this license does not apply to any document created using the Font Software.

TERMINATION
This license becomes null and void if any of the above conditions are not met.

DISCLAIMER
